JiP Software

Custom Built Software

Who we are
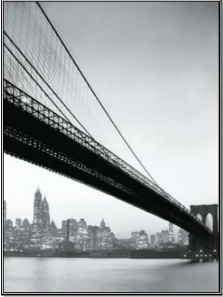

JiP Software is a provider of wide range of effective, custom built, software solutions. Over many years we have had an opportunity to work with many Polish and international companies, and have gained extensive **experience** in development of small-sized to enterprise-wide applications.

Our headquarter is located in Warsaw. Although most of the development is done on-site, our software is working in many locations in Poland and the European Union. The policy of our company is to deliver **high quality** solutions, maintain customer satisfaction and an excellent client relationship throughout the entire life cycle of the product.

How we work

We have a thorough understanding of current and legacy operating systems, technologies and development tools. Although there is no perfect technology that can be effectively applied to solve all kinds of business problems, there is usually one that is **optimal** for a given project. The process of choosing the right one can be a challenging task, but is essential for delivering the right product at the right time.

In many cases it is necessary or at least desirable to **integrate** a solution with existing systems. We have experience in integrating our projects with intranets, LDAP directories, Oracle/MS SQL databases, GIS and SAP R/3 systems. For efficient and flexible operation our applications are often cross platform/cross technology solutions and incorporate mobile devices next to traditional Windows/UNIX* or web based systems.

Why we make a difference

We believe that good communication and understanding of customer needs has to start from day one, through all phases of application development, and continue after product deployment. This long term **commitment** is essential, yet just a first step in delivering scalable and effective software solutions.

Our team of experienced software developers is guided by our company standards for planning, writing code and documentation. Yet they have the necessary freedom to integrate **new ideas** and maximize system usability.

The right software can greatly improve the efficiency of your business model. We deliver cutting-edge software products within **short time** schedules at **competitive prices**.

Should you have any questions or like to schedule a **meeting** please use the contact information provided below.
